## **GRINDER** EQUIPMENT

### MATCH THE GRIND TO BREW TIME

The brewing or water contact time with the coffee grounds is primarily determined by the grind size and bed depth. A longer brew time is required for the water to penetrate the larger grind particles. The recommended brewing contact times for each grind size are shown here.

#### DRIP

General Guidline: The finer the grind, the shorter the time.

#### **BREWER CYCLE TIMING**

The brew cycle delivery time of a coffee brewer assists in determining the recommended coffee grind to produce a quality cup. Experimenting with a coarser or finer grind will help operators discover the preferred coffee flavor profile.

#### **BED DEPTH**

The ideal depth of the coffee bed in the brew basket is 1-2 inches (2.5-5cm) regardless of the volume of brew. If a coffee bed is less than 1 inch (2.5cm), the water may move through it too quickly and under-extract. Water moving too slowly through a bed depth of more than 2 inches may cause over-extraction and a bitter taste.

### **G** Series VH Grinder

Users have 340° of grind resolution on the "no-click" selection dial, giving them complete freedom when dialing-in their ideal grind particle size.

Available in 1lb, 2lb, and 3lb versions, the GVH features hoppers that are sleek, tinted, and incredibly durable

Versatile design allows grinding into bags, cans, and cups and other containers to meet a multitude of customer needs

Fast grinding - one pound (.45kg) in about 30 seconds - maximizes speed of service

340° dial resolution for precise tuning of grind particle size

Ergonomic clamp for holding smaller size bags and containers in place for hands-free operation

Easy to use cleaning lever for complete removal of coffee from grind chamber ensures the customer gets all the coffee ground for them

Precision Rockwell 65C hard burrs provide consistency, grind after grind
