

BUNNlink® is an IoT machine management platform built by BUNN to provide a secure mechanism to remotely monitor and communicate with connected equipment. BUNNlink enables data-backed business decisions and allows the deployment of a customized user interface.

## Alerts & Notifications

Receive real-time, custom alerts and notifications about operational and service related issues.

- Custom configuration
- No portal login necessary
- Receive via text message or email

## Remote Machine Management

Ensure your machines are operating consistently and efficiently across all locations through the BUNNlink dashboard.

- Change key settings, modify schedules or update drink pricing
- Monitor equipment across various sites, districts or regions with dashboards and tools to aid in managing a fleet of equipment
- Update digital media and configurations on equipment remotely

## Analytics & Reporting

Access on-demand reports for machine statistics, machine alerts, product and cup inventory and beverage sales to check the health of your business. Reports delivered on demand or to your email inbox without portal login.

## Enterprise System Integration

Customers can use in-house systems and interconnect with BUNNlink as a backend service leveraging our BUNNintegrate solution.

- Receive daily data feeds of machine date
- Change schedules
- Update machine settings
- Push new recipes

## Secure Connectivity

Peace of mind through secure end-to-end encryption of all equipment communication with options to connect using cellular, Wi-Fi or wired Ethernet. API integration makes it easy to link data into existing databases for analysis.

BUNNdigital solutions are SOC2 ([www.aicpa.org/soc4so](http://www.aicpa.org/soc4so)) compliant ensuring security is first in our approach to building and delivering solutions.
