

VirtualTOUCH™ FOR FAST CUP® & SURE IMMERSION®

A QR-Code that enables an operator to scan, select and dispense a fresh beverage and watch the entire process unfold on the machine screen by following prompts that appear on the consumer's smartphone.

How It Works

Simply scan a QR-Code using a smartphone. You will be taken to a mobile web page where you can make a drink selection, follow simple prompts on your mobile device, and watch the drink progress unfold on your equipment's screen.

Simply scan a QR-Code
using a smartphone

What You Need

BUNNlink® hardware and annual subscription available with new equipment or a field upgradeable service kit. You will also need the latest operating software which provides VirtualTOUCH Dispense.

CRESCENDO® Technology

The operator selects and dispenses a beverage by hovering a fingertip in front of a sensor without touching the machine.

How It Works

The operator selects and dispenses a beverage by hovering a fingertip in front of a sensor without touching the machine. This optional technology allows users to make desired beverage selection without touching the machine.

What You Need

The current software which enables the VirtualTOUCH option to be selected.

JDF® AND NITRON® TOUCHLESS ADD-ON KIT

Add this kit to your JDF or Nitron for an easy, no-touch alternative to dispensing beverages.

How It Works

Simply place a cup on the drip tray below desired dispense nozzle and hover a hand or finger in front of the corresponding sensor below.

What You Need

The Nitron Touchless kit or the JDF touchless Kit

Anti-Microbial Film: This film covers your common contact points and allow your equipment to function normally without leaving a sticky residue when replaced.

Available in full sheets or pre-cut sizes.

Tap-Kins™: Equipment that utilizes handles can now be a reliable way to dispense beverages while ensuring clean contact. Tap-Kins are biodegradable and recyclable sleeves that users can easily take from a dispenser, slide over any handle, and discard without any direct surface contact.

*Dispenser and sleeves sold separately
Sleeves are sold by the case;
300 sleeves per roll and 10 rolls per case*

Anti-Microbial Parts: Clean contact beverage solutions are available for equipment you already own. BUNN offers anti-microbial replacement parts for high-frequency contact points such as faucets, handles, and dispense membrane switches. Anti-microbial film can be applied to touchscreens, touch switches, membrane switches, and handles.

*Anti-microbial faucets, handles, and films can easily be self-installed
Anti-microbial membrane switches will require technician installation*

Push Style Faucets: BUNN servers, new or old, can be outfitted with push-style faucets that emphasize clean contact. These faucets are easy to install and offer a clean contact solution for beverage dispensing.

Faucet Adapters: Existing BUNN equipment and servers can be part of a clean contact beverage program. Stainless-steel faucet adapters attach to BUNN Soft Heat®, ThermoFresh®, and tea dispensers, allowing for easy cup-push service.

Contact your BUNN representative for additional information about VirtualTOUCH.
